The case against Microsoft is not about anti trust it is about the freedom of interprize to get ahead in a competitive maner. The states are only after a free ride in the developement of new produces. Why should Microsoft have to give up there trade secrets anymore than General Motors. As for a monopoly how about the car companys You have to buy Ford parts to fix a ford car as well as the rest of the car companys. How about Boeing , they have 100% monopoly on airplanes. Microsoft has given a huge amount of settlement offer. Tell the states to go to hell and develope there own products.
